ABOUT ME

I am an active 3rd-year undergraduate student of Informatics at VŠB-Technical University of Ostrava. My expertise includes programming with Python, C# (ASP.NET), PL/SQL, and relational databases. During my studies, I have developed several projects, which you can explore via the link below. I am a quick learner, responsible, and enjoy working in a team. Currently, I am looking to apply my skills in a practical setting, whether through an internship, traineeship, part-time position, or other collaboration opportunities.

EXPERIENCE

- **C#** ([LINK TO GITHUB](#))

Web system built on the ASP.NET Core MVC architecture, featuring dynamic presentation and an interactive ordering process. Includes a fully functional administrative panel and a user authentication system.

Technologies: C#, ASP.NET Core MVC, Razor Views (.cshtml), CSS (Bootstrap), JavaScript, JSON.

- **C#** ([LINK TO GITHUB](#))

Employee record system based on the ASP.NET Core Web API (Server) and Blazor WebAssembly (Client) architecture. The application implements a robust data import system from external JSON files with automatic mapping of relational links. It includes integration with an external API for user geolocation based on IP address and advanced logging using the Serilog library.

Technologies: C#, .NET 8, Blazor WASM, Entity Framework Core, REST API, Serilog, JSON, IP Geolocation API, MS SQL Server.

- **PYTHON** ([LINK TO GITHUB](#))

Desktop application developed in Python using the Tkinter library for simple inventory management. The application allows data manipulation via a graphical user interface and responds to user inputs. This project demonstrates the ability to create GUI applications, structure code, and work with application logic outside the console environment.

Technologies: Python, Tkinter, GUI development, Data manipulation.

- **SQL (FILE)**

Design and implementation of a relational database for sports tournament management. The project includes a complete database model comprising entities such as players, teams, matches, tournaments, referees, and locations. Designed with an emphasis on correct entity relationships, data normalization, and integrity constraints using primary and foreign keys.

Technologies: MS SQL Server, Relational Databases, Oracle Data Modeler, ER Diagrams.

- **C** ([LINK TO GITHUB](#))

A simple console game inspired by Bulánci, implemented in C. The project focuses on core game logic, loops, conditionals, and user input. The goal was to practice procedural programming, algorithmic thinking, and working with a low-level language. **Technologies:** C, Console application, Algorithms, User input.

EDUCATION

2023-Present

VŠB-TECHNICAL UNIVERSITY OF OSTRAVA

- Informatics, Bachelor's degree

2023-2023

VŠB-TECHNICAL UNIVERSITY OF OSTRAVA

- Czech language courses

LANGUAGES

- English (B2)
- Czech (B2)
- Russian (C2)
- Ukrainian (C2)
- French (A1)

PERSONAL SKILLS

- **Analytical Thinking:**

Ability to break complex problems into smaller, solvable components.

- **Attention to Detail:**

Focus on code quality to minimize errors in the final solution.

- **Teamwork:**

Effective communication and knowledge sharing to achieve collective goals.

- **Critical Thinking:**

Objective assessment of technologies and approaches to select the best fit.

TECHNICAL SKILLS

- **Version Control: Git / GitHub:**

Repository management and versioning

- **Architecture:**

Fundamentals of application design and logical separation of backend from UI.

- **OOP:**

Principles of classes, objects, and encapsulation for writing organized code.
